

New Public Works Facility

Project Scope

The construction of a new Public Works Facility as shown would be adjacent to the current Public Works building, however the final location has not been determined yet.

The existing Public Works facility is undersized for the current and future needs of the Village. Additional interior parking for all vehicles and equipment, staff facilities, and storage is necessary to continue to provide services in an efficient and cost effective manner.

Estimated Cost

The current construction and furnishings estimate of the new facility is \$17.6 million.
